

Class: Final Year (Computer Science and Engineering)

Year: 2021-22

Semester: 1

Course: High Performance Computing lab

ESE Exam

22/11/2021 01.00 PM – 04.00 PM

Exam Seat No:

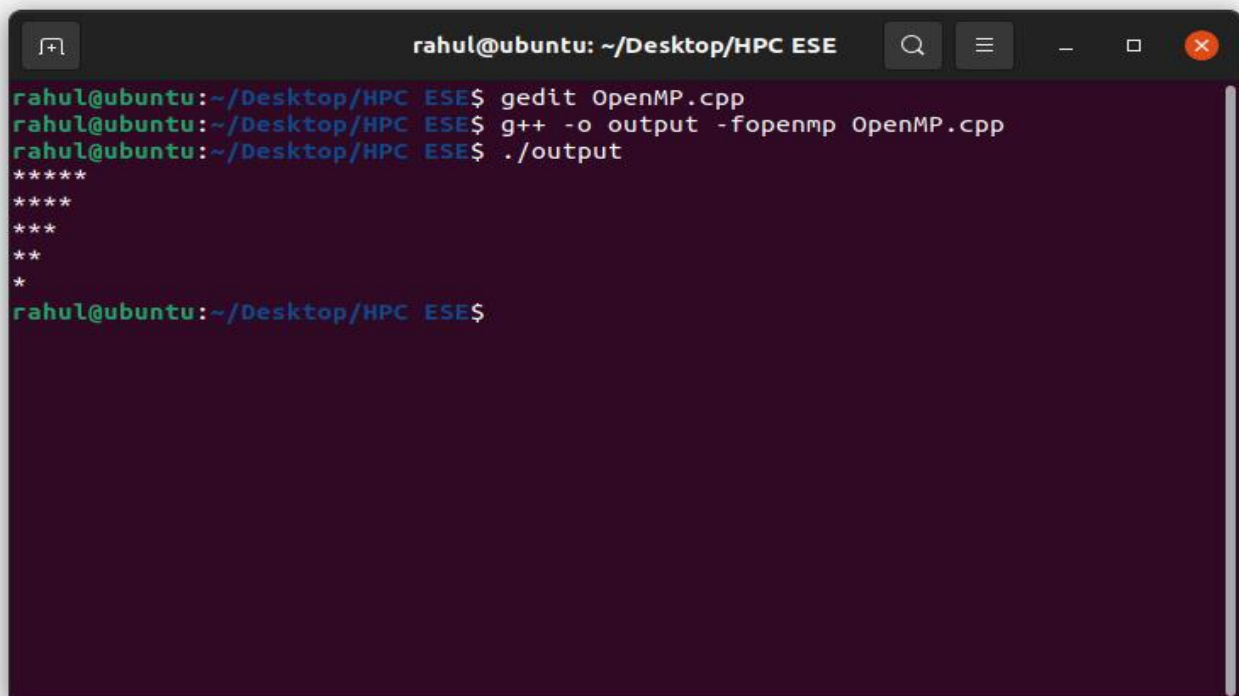

Name: Rahul Sanjay Naravadkar

Exam Seat Number: 2018BTECS00005

Problem Statement 1

Statement: Write an OpenMP program to print inverted pyramid using *.

Screenshot 1:

```
rahul@ubuntu: ~/Desktop/HPC ESE
rahul@ubuntu:~/Desktop/HPC ESE$ gedit OpenMP.cpp
rahul@ubuntu:~/Desktop/HPC ESE$ g++ -o output -fopenmp OpenMP.cpp
rahul@ubuntu:~/Desktop/HPC ESE$ ./output
*****
****
***
**
*
rahul@ubuntu:~/Desktop/HPC ESE$
```

Information:

Compilation command: - gcc -o output -fopenmp Question1.cpp

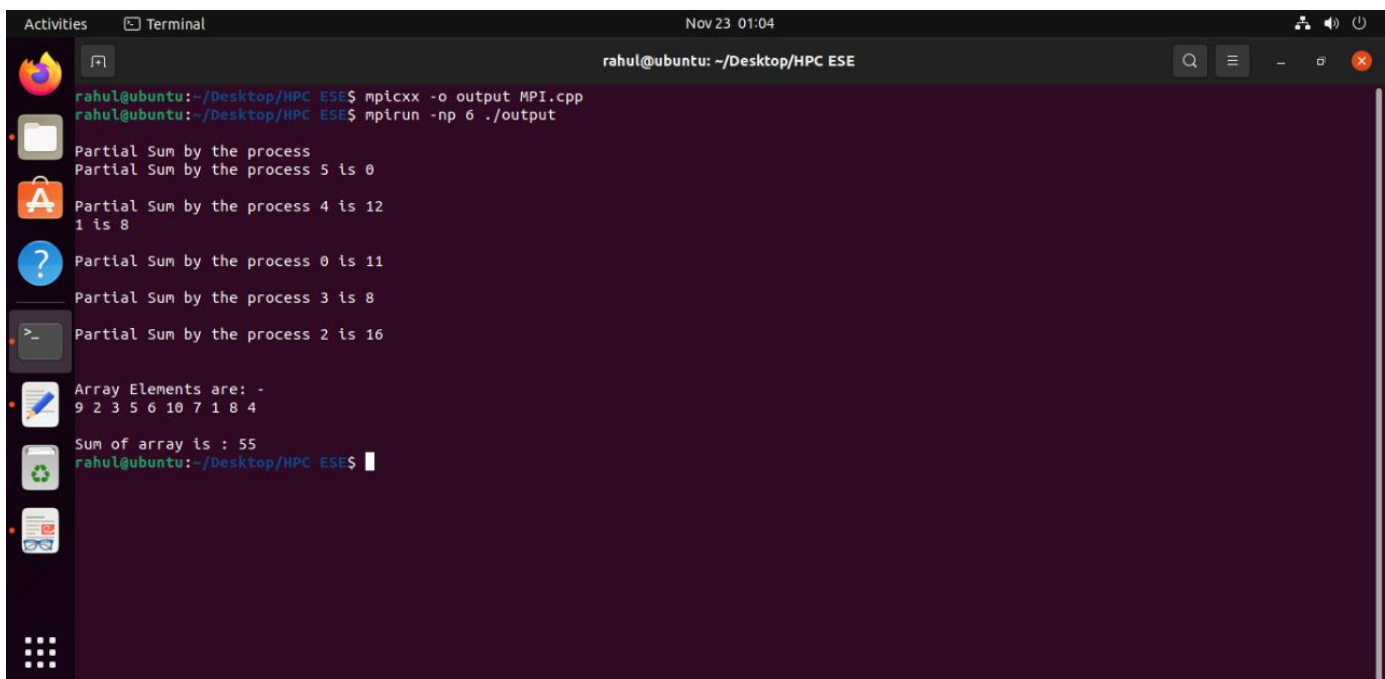

Execution command: - ./output

This OpenMP code prints the reverse half pyramid.

Problem Statement 2

Statement: Implement MPI program to reduce the data from n processes to root process.

Screenshot #1:

```
rahul@ubuntu: ~/Desktop/HPC ESE
rahul@ubuntu:~/Desktop/HPC ESE$ mpicxx -o output MPI.cpp
rahul@ubuntu:~/Desktop/HPC ESE$ mpirun -np 6 ./output

Partial Sum by the process
Partial Sum by the process 5 is 0
Partial Sum by the process 4 is 12
1 is 8
Partial Sum by the process 0 is 11
Partial Sum by the process 3 is 8
Partial Sum by the process 2 is 16

Array Elements are: -
9 2 3 5 6 10 7 1 8 4

Sum of array is : 55
rahul@ubuntu:~/Desktop/HPC ESE$
```

Information:

Compilation command: - mpicxx -o output MPI.cpp

Execution command: - mpirun -np 6 ./output

Here the MPI code runs with reduce clause that reduces the partial sum of elements of array in the root process.

Problem Statement 3

Statement: Implement Matrix-Vector multiplication using CUDA.

Screenshot 1:

```

<<<<<<<<< initial data:
Vector
4.000000  3.000000  2.000000

Matrix:
4.0000  2.0000  4.0000  3.0000
1.0000  2.0000  2.0000  3.0000
4.0000  3.0000  4.0000  4.0000

Running Kernel...

>>>>>>>> final data:
Vector
27.000000  20.000000  30.000000  29.000000
```

Information:

Compiled and ran the code on Google Colab.

CUDA program multiplies the randomly created vector and matrix with the help of 1 block and M number of threads in it.

Technologies Used:

OpenMp, MPI, CUDA, Google Colab
